TITLE: World-wide standardization in the field of electroinsulating materials 15

SOURCE: Electrotehnica, no. 7, 1965, 258-264 14

TOPIC TAGS: insulating material, thermal stability

ABSTRACT: A report on the activities and recommendations of Committee 15 of the International Electrotechnical Commission and its various working groups in the field of electroinsulating materials. Special attention is given to the work on rapid tests, thermal stability and the specification of characteristics and testing methods. It is suggested that periodic reports on the work of the Committee be issued in Rumanian periodicals. Orig. art. has: 1 table. [Based on authors' Eng. abst.] [JPRS]

TITLE: Determination of the contrast product ioduron

SOURCE: Revista de chimie, v. 17, no. 2, 1966, 108

TOPIC TAGS: iodinated organic compound, analytic chemistry

ABSTRACT: The authors describe the determination of the contrast medium Ioduron by means of the mineralization of the organically bound iodine by the action of nascent hydrogen in alkaline medium, followed by determination of the halogen by the Volhard method. The analysis is rapid and accurate and gives reproducible results. Orig. art. has: 1 table and 1 formula. [JPRS: 36,556]

Title : The Effect of Raising and Lowering of Subsurface Water Level on the Yield of Fruit Trees.

Orig Pub : Gradina, via si livada, 1957, 6, No 5, 94-95.

Abstract : On the fruit-growing plot "Balta" of the Ivesht farm sharp changes in the yield of fruit trees in relation to the subsurface water levels is observed. Abundant rains in 1956 resulted in flood which led to a mass dropping off of fruit. On the plot situated 1-2 meters higher (a terrace) the activity of the roots was not disturbed and the trees were not harmed. -- Ye.T. Zhukovskaya

Title : Grape Cultivation in the North of Rimnicul Vilcii

Orig Pub : Grudina, via si livada, 1957, 6, No 1, 44-48

Abstract : Last year studies showed the possibility of vine cultivation in the region to the north of Rimnicul Vilcii. Brushwoods of Vitis sylvestris were encountered in ancient times in Rimnicul and Vilcii valleys. The Jordan, Krimposhie and Tei local varieties are widespread in the form of trellis and bowers. An assortment is recommended. Table varieties are: Chasselas dore, Muscat of Hamburg, Regina. For high quality wines, Italian Riesling, Pine gris and Sovignon are

Chemical polishing of aluminum and of its alloys. Emanuil G. Popescu, *Ind. usoară* (Bucharest) 5, 145-8(1958). Polishing baths contg. either H_3PO_4 or NH_4HF_2-HNO_3 mixts. give very good results, but strongly alk. solns. are too hard to handle. In order to avoid excessive corrosion stainless steel containers are recommended for solns. contg. H_3PO_4, whereas polyethylene-coated ordinary steel vats are required for the bifluoride base solns. Chem. polishing is superior to other polishing methods.

Title : The Study of Preserved Blood.

Orig Pub : Fiziol. norm. si patol., 1956, 3, No 5, 553-558

Abstract : A study was made of the leukocyte count (from the 1st through the 32nd day) of preserved blood obtained on a 10% solution of sodium citrate and on Soviet stabilizer No 7. The number of leukocytes declined to 900 or 1,000 per mm3. The cell structure was destroyed, and the disintegration and disappearance of the cells followed. Lymphocytes and eosinophils were the most stable, and neutrophils the most sensitive. Stabilizer No 7 receives a higher appraisal than the 10% solution of sodium citrate.

2970. STORED BLOOD. II. THROMBOCYTES IN STORED BLOOD - Contribuţii la studiul sîngelui conservat. II. Trombocitele sîngelui conservat - Popescu E. Clin. Hematol., Spitalul nr. 2 C.F.R., Bucureşti - REV. FIZIOL. 1957, 4/6 (531-535) Graphs 1

In stored blood containing 10% Na citrate the thrombocytes begin to disappear in the first few days and have disappeared practically completely at 14 days. In blood preserved with 'Soviet stabilizer no. 7' (which contains glucose, sulphacetamide and ethacridine lactate in addition to citrate) the number of thrombocytes falls only slowly during the first 7 days, after which the rate of disappearance is parallel to that with citrate alone. The thrombocytes swell up before disappearing.

TITLE :Plasma Transfusions in Experimental Immunologic Hemolytic Anemia.

ORIG. PUB. :Fiziol. norm si patol., 1958, 5, No. 3, 229--234

ABSTRACT : In experiments conducted on immunized rabbits and guinea pigs, the intravenous transfusion of plasma from animals of the same species increased the severity of the shock and the mortality and caused a rise in the titer of antiserum precipitins in the animals injected with the heterogenous serum. Following the plasma transfusion the intensity of hemolysis in the guinea pigs with immunologic hemolytic anemia diminished. Inasmuch as the plasma transfusion raised the antibody titer, it is thought that the antihemolytic effect of plasma

The alkylation of phenols and cresols by olefins. O. Voicu and F. Popescu. *Acad. rep. populare Romîne, Studii cercetări chim.* 7, 587–602(1959).—The parameters of the alkylation of phenols and cresols by high mol. wt. olefins were studied. The olefins employed were isooctene and dodecene, 96–98% H_2SO_4 was the catalyst, and the starting temp. was 40–42° (the olefins were added dropwise to the phenol-H_2SO_4 mixt.). Max. yields of 72.5% isooctylphenol, 51.7% dodecylphenol, 63.2% isooctylcresol, and 44.3% dodecylcresol were obtained at optimum conditions. Repeated alkylations raised the yields to 95%. 30 references. (Summaries in Russian and French). M. Lapidot
